EDUCATION

B.S in Computer Science **March 2026**
Al-Ahliyya Amman University

SKILLS

- **Business Analysis & Product:** Requirements Gathering, Product Ownership, Backlog Management, User Stories & Acceptance Criteria, Stakeholder Management, Business Process Management, Process Improvement, Agile/Scrum, Definition of Ready, Sprint Metrics, ERP Systems, Documentation
- **Quality & Delivery:** UAT, Test Case Design, Test Planning & Tracking, Defect Management & Reporting, Root Cause Analysis, API & Integration Testing, Regulatory/Compliance Testing, Automated Testing (Playwright), Accessibility Testing, CI (GitHub Actions), Web Accessibility (WCAG 2.1 AA)
- **Data & Reporting:** SQL (MySQL, PostgreSQL), Power BI, Snowflake, Excel, Data Cleaning & Validation
- **Technical:** Python, TypeScript, JavaScript, C#, PHP, React/Next.js, Tailwind CSS, Bootstrap, REST APIs, Jira Cloud API, Claude API, Vercel, Netlify, Git, Docker, Jira, SAP, N8N, WordPress, Linux/cPanel, Apache, SSH, Microsoft Office

EXPERIENCE

Staq **June 2026 - Current**
Product Owner & Business Analyst Intern *Amman, Jo*

- Own and prioritize the product backlog, turning business, security and regulatory requirements into user stories and clear acceptance criteria for the engineering team.
- Act as the bridge between business stakeholders and developers, running requirement sessions, clarifying scope mid-sprint, and keeping delivery aligned with agreed priorities.
- Design and execute UAT and end-to-end test cases across a microservices platform, tracking execution in structured trackers and reporting defects with reproduction steps engineers can act on directly.
- Investigate issues to root cause before escalation, separating genuine product defects from configuration, data and environment problems — cutting avoidable back-and-forth with development.
- Author functional documentation and process flows covering transaction handling, product configuration and security controls, giving business and technical teams a shared reference point.
- Lead certification test design for the platform's card products, currently working through Visa certification — writing and executing the test cases, validating platform behaviour against expected outcomes, and assembling the evidence pack the certification depends on.

Freelance **April 2026 - Current**
Website Manager & Operations Support *Remote*

- Sole developer and administrator for seven IEEE-affiliated academic conference and workshop websites (AGCS, FLTA, CQCS and co-located events) across five domains.
- Handle server administration, deployment and hosting across Linux, cPanel, Apache and SSH, taking backups and verifying changes before and after every release.
- Build and maintain pages to each site's existing design system, bringing new and edited pages up to WCAG 2.1 AA accessibility standards.
- Act as first response for author-facing issues — registration, content and link defects — working to conference deadlines that cannot move.
- Audit sites for accuracy and security, resolving inherited defects and keeping published content correct ahead of publication.

Samsung Electronics Levant **July 2025 - October 2025**
Business Data Analysis Intern *Amman, Jo*

- Processed and validated large MCS datasets, performing data cleaning and quality checks to ensure accuracy for reporting and analysis.
- Acted as Business Analyst for a sales organization restructure: gathered requirements, coordinated stakeholders, and supported UAT for successful implementation.
- Analyzed ERP and operational data to identify inefficiencies and recommend workflow improvements supporting decision-making.
- Collaborated with cross-functional teams to align on data requirements and project objectives.
- Supported project management by tracking progress and ensuring timely delivery.

PROJECTS

Research | *Sociodemographic factors, anxiety and attitudes toward generative artificial intelligence among nurses, Frontiers in Psychiatry (Q1 Scopus-indexed)* **April 2026**

- Co-authored a peer-reviewed article published in Frontiers in Psychiatry (DOI: 10.3389/fpsyt.2026.1779382).
- Designed the survey, coordinated data collection, and conducted statistical analyses to identify factors influencing nurses acceptance of Generative AI.
- Interpreted findings to highlight key drivers of anxiety and barriers to adoption.
- Developed actionable recommendations for training and policy to reduce anxiety and support clinical integration of AI.

Sprintwise | *Next.js, TypeScript, PostgreSQL, Prisma, Jira Cloud API, Playwright* **October 2026**

- Built Sprintwise, a live web app that scores user stories for sprint readiness against nine fixed rules, out of 100 with a plain-English reason for every point lost, and flags AI-drafted stories that read well but aren't ready to start.
- Measures each sprint against a locked day-one baseline (scope added and removed, churn, completion and why scope changed), plans against the team's real velocity, tracks trends across sprints, and shares a one-page report with stakeholders by link.
- Integrated Jira Cloud both ways, importing, syncing and sending edits back, with CSV import as a fallback; no AI reads the tickets.
- Ran it as a product: wrote the requirements and backlog, logged each product decision with its reasoning, and shipped versioned releases with automated unit, end-to-end and accessibility tests. Live at sprintwise.app with a public demo.

DocSera | *C#, JavaScript, CSS, Next.js, TailwindCSS, MySQL* **July 2025**

- Developed Docsera, an intelligent appointment management platform featuring an AI-powered chatbot for patient inquiries, bookings, and automated reminders. Built secure, role-based portals for patients, clinicians, and administrators to streamline communication and reduce scheduling conflicts.
- Implemented the solution using API calls, logic with C#, Next.js (React), MySQL, and Tailwind CSS; integrated n8n for workflow automation and conducted end-to-end testing to ensure performance and reliability.
